

Are you the parent of a child with a diagnosis of Attention Deficit/Hyperactive Disorder?

Research Description & Purpose: Researchers at the Oklahoma State University want to look at how a child's ADHD symptoms are associated with the parent-child relationship. This research study is for parents of children aged 6-14- years-old who have been diagnosed with ADHD. Research is always voluntary!

Would the study be a good fit for me? This study may be a good fit for you if: 1.) Have a child that is between 6-14-years of age 2.) This child has a diagnosis of ADHD 3.) The parent speaks fluent English and has lived in the U.S. for 8 years prior to taking this survey

What would happen if I took part in the study? If you decide to take part in the research study, you would:

-Fill out a total of 5 surveys that would look at stress, parent child relationship, your child's ADHD symptoms, and parenting style.

-Participants who take part and complete their surveys get a \$5 dollar gift card for Amazon to thank them for their time. **Specify Location of Research:** The survey should only take about 90 minutes to complete and you can do this online.

Contact Information: To take part in this research study or for more information, please contact Sierra Hightower at sierra.rain.hightower@okstate.edu **PI Name, department & address:** The principal researcher for this study is Sierra Hightower and Maureen Sullivan at Oklahoma State University.
